# INTRODUCTION

# WHAT IS BEAMER?

The beamer classes for  $\text{\LaTeX}$  are used to create presentations that are to be shown with a beamer. The text typesetting system creates PDF files that can be shown by a large number of programmes.

The present theme was adapted from HSRM theme by Benjamin Weiss and it makes the creation of slides (assuming basic knowledge of  $\text{\LaTeX}$  ) child's play.

# SYSTEM REQUIREMENTS

In order to successfully create presentations with this theme, the following requirements must be met by the system:

- LuaLaTeX must be used to typeset the slides.
- Besides some standard packages, the packages `beamer`, `pgf` and `xcolor` must be installed.
- The fonts 'Flama-Light', 'Flama-Book' and 'Flama-Medium' should be installed.  
Alternative: 'Arial'

# TUTORIAL

# BASIC STRUCTURE OF THE DOCUMENT

The basic structure is simple:

---

```
1 \documentclass[compress]{beamer}
2 % Theme
3 \usetheme{sleek}
4 % General presentation settings
5 \title{Presentation title}
6 \subtitle{Subtitle of the presentation}
7 \author{Your name}
8 \institute{Study area \\\ {\Medium FEUP}}
9 \begin{document}
10 %Slides
11 \end{document}
```

---

## THEME OPTIONS

To customise the presentation, the following options can be specified when loading the theme package, in the options field, `\usepackage[options]{package}`.

Option	Effect
<code>noflamma</code>	If you do not want the Flama font you can switch to the Arial font with this option.
<code>noserifmath</code>	Formulas are also set sans serif.
<code>nosectionpages</code>	The section introduction pages will be hidden.
<code>footline</code>	Footline with author, course and slide number.

# PRIMARY COLOURS

All colours predefined are listed below and in the following slides. You may add more using the same code structure as in the `colors.tex` file.

`maincolor`

`sleekRed`

`sleekRedDark`

`sleekWarmGreyDark`

`sleekWarmGreyLight`

`sleekLightGrey`

`maincolor`

`sleekRed`

`sleekRedDark`

`sleekWarmGreyDark`

`sleekWarmGreyLight`

`sleekLightGrey`

# SLIDE STRUCTURE

Structure in Beamer is the same as in  $\text{\LaTeX}$  using `section`, `subsection`, etc. For slides the `frame` environment is defined.

The slide title can be passed directly to the `frame` environment or set within the environment using `\frametitle{slide title}`

---

```
1 \section{My Section}
2 \subsection{My Subsection}
3 \begin{frame}
4 \frametitle{slide title}
5 % slide content
6 \end{frame}
```

---

# TITLE PAGE AND TABLE OF CONTENTS

The title page is created with

---

```
1 \maketitle
```

---

And the table of contents with

---

```
1 \begin{frame}{outline}  
2   \tableofcontents[hideallsubsections]  
3 \end{frame}
```

---

The option `hideallsubsections` is useful for longer presentations to keep the table of contents compact.

# ENUMERATIONS

Enumerations are possible with the `enumerate` and the `itemize` environment.

1. Item 1
  - 1.1 Nested item
2. Item 2
  - Point 1
  - Point 2
3. Item 3

# ENUMERATIONS WITH TIMINGS

A list may be presented showing each bullet or item one by one. To achieve this result please see the source code for this frame.

- Visible from the 1st slide
- Visible from the 1st slide
- Visible from the 2nd slide
- Visible from the 3rd slide

# ENUMERATIONS WITH TIMINGS

- Visible from the 1st slide
- Visible from the 2nd slide

- Visible from the 1st slide
- Visible from the 2nd slide
- Visible from the 3rd slide

The standard display style is the one on the left, if you want to see the upcoming items (right column style) just add the command `\setbeamercovered{transparent}` before the beginning of the document.

# ENUMERATIONS WITH TIMINGS

- Visible from the 1st slide
  - Visible from the 2nd slide
  - Visible from the 3rd slide
- Visible from the 1st slide
  - Visible from the 2nd slide
  - Visible from the 3rd slide

## Display content at a specific slide

There is also the option to show content only at a specific slide or set of slides, using the command `\only`. The `\onslide` command can also be used, but the behaviour is a little different.

# EMPHASIS

In the Beamer class, the function `\alert` is defined to highlight individual words.  
Example:

- **highlighted text**
- This phrase is an example of the **alert** command.

Additionally, `\quoted` and `\doublequoted` can be used, resulting in the following outputs:

'single quotation marks'

"Double quotation marks"

# SIMPLE BLOCK WITH BULLETED AND ENUMERATED LIST

Block environments are defined in Beamer for structuring purposes.

## Block with bulleted and an enumerated list

- Point 1
  - 1. Item 1

```
1 \begin{block}{Block with bulleted and enumerated list}
2   \begin{itemize}
3     \item Point 1
4     \begin{enumerate}
5       \item Item 1
6     \end{enumerate}
7   \end{itemize}
8 \end{block}
```

# ALERT BLOCK

## Alert Block

An Alert Block is coloured with the first primary colour.

---

```
1 \begin{alertblock}{Alert Block}
2     An Alert Block is coloured with the first primary
      colour.
3 \end{alertblock}
```

---

# EXAMPLE BLOCK

## Example Block

An Example Block is coloured with the first secondary colour.

---

```
1 \begin{exampleblock}{Example Block}
2     An Example Block is coloured with the first secondary
      colour.
3 \end{exampleblock}
```

---

## BLOCK WITH OTHER COLOUR

### Block with other colour

Another secondary colour is used in this block.

---

```
1 \begingroup
2 \setbeamercolor{block title}{bg=sleekSec2Dark}
3 \setbeamercolor{block body}{fg=white,bg=sleekSec2}
4 \begin{block}{Block with other colour}
5     Another secondary colour is used in this block.
6 \end{block}
7 \endgroup
```

---

# EXAMPLE SLIDES

## OTHER EXAMPLES

Below are more example slides attached without additional explanation.  
Just have a look at the source code to see how the slides were created.

# PLOT WITH CAPTION

Figure: LFE channel frequency spectrum

## TABLE

**Table:** Selection of window function and their properties

Window	First side lobe	3 dB bandwidth	Roll-off
Rectangular	13.2 dB	0.886 Hz/bin	6 dB/oct
Triangular	26.4 dB	1.276 Hz/bin	12 dB/oct
Hann	31.0 dB	1.442 Hz/bin	18 dB/oct
Hamming	41.0 dB	1.300 Hz/bin	6 dB/oct

## FORMULAS

## Fourier Integral

$$F(j\omega) = \int_{-\infty}^{\infty} f(t) \cdot e^{-j\omega t} dt$$

## Factorial

$$n! = 1 \cdot 2 \cdot 3 \cdot \dots \cdot n = \prod_{k=1}^n k$$
